Legaspi, Edmore CPT-42   **Mrs. Navales**

Activity #11
You will create a presentation on your chosen topic and application. This will give you an opportunity to develop a teaching-learning resource suited for the learners.
Be guided by the following:
1. Read the Learning Essentials before start doing the slide presentation.
2. As you prepare your own slide presentation, answer the activity form.
3. Analyze your activity form by answering the question given.
4. Make a reflective writing based on the difficulties that you encounter in making the slide presentation.
5. For purposes of reliability, include this in your e portfolio.
6. In slide 1-12, put the picture of every slide that you created. You may add more boxes if needed.

Learning Essentials:
    Presentation software are useful in organizing your lesson with a series of test and graphics, often with audio and video to capture the interest of your learners. The most popular one is the PowerPoint, but you can also explore so many other software of apps like Prezzi, Powtoon, Keynote, Presentit and sliderocket.
    When creating audio-visual presentation, remember the following:
1. Plan your presentation by drafting an outline. Ensure that information is organized in proper headings and sub-headings based on how pieces of information relate with each other.
2. Abide by the Rule of Six. Each slide should have a maximum of six lines and each line will have six words.
3. Ensure that your font size is large enough to be seen by learners at the back. Font size for titles should not less than 36-40 and 32 for the rest of the text.
4. Include more key words or phrases and less of the whole sentences.
5. Animation should have a clear purpose. It should only be used if it will help highlight important points, strongly communicate an idea, and not to distract the learners.
6. Picture speak a thousand words. Add pictures and even video clips to enrich your presentation.
7. Follow the 3 C's for information. All information included should be correct, current, and complete.
8. Proper citation should also be observed. Include a list of references at the end of the presentation.

Analysis:
1. What are the good features of a slide presentation?
- Use standard position, colour and styles.
- Only use necessary or essential information.
- Content should be understandable to anyone who reads it (you shouldn't have to explain it to them)
- Use colours that are contrasting but not jarring or distracting.
- Pictures can catch the attention of the students
2. Which of these features are present in the slide presentation you made?
Almost all the features.

3. Which features are not present in the slide presentation you made?

The voice animation, music, stylish font and hyperlink are not available in my slide show. However,future improvements can be focused in the said areas.

Subject Matter/Topic: Computer

Objectives:
1. To understand the computer and the parts of the computer.
2. To define the definition of each part
3. To gain knowledge about the computer
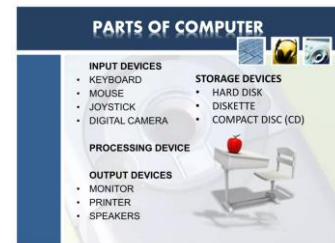

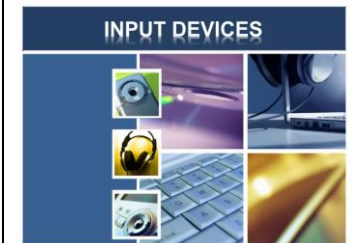

Title of the Presentation: Parts of Computer
